The Stock Exchange of Thailand

Kiatnakin Bank Public Company Limited ("the Bank" or "KK") submits the Management Discussion and Analysis (MD&A) report for the year ended December 31, 2016, comparing operating performance and financial position for the year 2016 with those of 2015. This report discusses principal changes in the unaudited consolidated financial statements.

Overall market environment

The Thai economy in the fourth quarter of 2016 continues to expand from the following key factors 1) Increased in public spending together with various economic stimulus initiatives; year-end tax privilege for Baht 15,000 domestic consumption, payment to low-income non-agricultural related individuals 2) Continued increase in agricultural prices for petroleum-related products 3) Signs of recovery in the export sector partly from the increased in oil prices. Nevertheless, negative factors impacting the economy still remain including tourism sector impacts from the recent measures to curb illegitimate tour operators resulting in the decline of almost 900,000 Chinese tourists. Private investment meanwhile, has still not recovered amidst the on-going volatilities in the financial markets. The Bank in-house research projected the domestic economic growth for the year 2016 to be at 3.2% with the same growth projected for the year 2017.

The Bank of Thailand policy rate remained at 1.5% throughout the year. Inflation currently below the target level is projected to return to be within the target band of 1.00% - 4.00% within 1Q17. The Bank in-house research projected the policy rate to also remain at the same level of 1.5% for the year 2017.

The auto industry during the fourth quarter, the month of October and November, showed a contraction of 13.0% comparing to the same period last year partly due to the high base of last year from the increased in vehicle sales during the last quarter of 2015 prior to the increased in excise tax measures. When seasonally adjusted, new car sales still exhibit weak signs especially for the passenger cars segment. Sales for pick-up trucks and pick-up passenger vehicles (PPV) showed stronger sales contributed by the rising agricultural prices from the increased in crude oil prices. With on-going risks

including high household debts continuing to limit consumption, together with the reduced level of year-end promotional activities, the Bank in-house research estimated that the total number of car sales for the year 2016 to contract around 5.0% - 6.0% yoy while car sales for the year 2017 is projected to increase around 2.0% from year 2016 or sale of around 775,000 units.

In the equity market, the average daily turnover (SET and mai) for the year 2016 increased from Baht 44,302 million in 2015 to Baht 52,526 million, an increase of 18.6%. The SET index at the end of 2016, closed at 1,542.94 points, improving by 19.8% from 1,288.02 points at the end of 2015.
